CS8603 – Distributed Systems

Topic	Application of distributed concepts in real time
Overview of the Topic	The main objective is to learn the computing environment in which various components are spread across multiple computers (or other computing devices) on a network. These devices split up the work, coordinating their efforts to complete the job more efficiently than if a single device had been responsible for the task.
Teaching Method	Case Studies
Proof for the activity	Click here
Feedback from the students about the activity and Knowledge gained	Students got the knowledge about the concept of how to communicate and coordinate their actions
Outcome of the activity	Students are able to understand the communication and coordinate with distributed application.
