

CS8601_Mobile Computing

Topic	Versions of Android OS
Overview of the Topic	<ul style="list-style-type: none">• Android is a mobile operating system based on a modified version of the Linux kernel and other open source software, designed primarily for touchscreen mobile devices such as smartphones and tablets.• Android is developed by a consortium of developers known as the Open Handset Alliance and commercially sponsored by Google.• It was unveiled in November 2007, with the first commercial Android device, the HTC Dream, being launched in September 2008.• It is free and open-source software; its source code is known as Android Open Source Project (AOSP), which is primarily licensed under the Apache License. However most Android devices ship with additional proprietary software pre-installed, most notably Google Mobile Services (GMS) which includes core apps such as Google Chrome, the digital distribution platform Google Play, and associated Google Play Services development platform.
Teaching Method	Live lecture on different versions of Android.
Proof for the activity	Click Here
Feedback from the students about the activity and Knowledge gained	Students got the knowledge about versions and improvements in android versions.
Outcome of the activity	Students understood the technology transfer happening in Android mobile devices.
