

Topic- Fluorescent Lamp wiring

2. Overview of the topic- The fluorescent lamp is a type of lamp that works on the phenomenon of luminescence. Fluorescent lamps give high lumen output as compared to incandescent lamps. It came into existence in the 19th century. These lamps give the light of white color due to the coating of phosphorus on the inner surface of the glass tube.

3. Teaching method-own video lecture.

4. Proof of the activity: https://youtu.be/z_sukmJxK7U - Video in English

: <https://youtu.be/mO-43tabDkg> - Video in Tamil

5. Feedback from student and knowledge gained: students felt the video highly useful since the wiring and connection can be done at home and they told that they obtained clear idea about parts and the connections.
