

Planning Document

Course: **Operating Systems**

Course Faculty: **Dr Suresh Kumar K**

Activity: **ARCS Model Teaching**

Class – **II Year IT/CSE/AI&DS**

Teaching Unit/Point: **Unit 2 – Broad Topic - Process Synchronization**

Sub. Topic - **Requirements of Critical Section Problem**

Learning Objective: *To introduce the critical-section problem and solution to the critical section problem*

Discipline: **Information Technology**

Component	Implementation Strategies										
Attention	<p><u>The class will start with the following poll question. (10 Minutes)</u></p> <p>How many of you are familiar with the process of ATM withdrawal?</p> <p><u>The students will brainstorm with the following questions, and answers will be noted on the board.</u></p> <ol style="list-style-type: none"> 1. How can a person do a transaction in an ATM at a time? 2. If two or more people need to do a transaction, what will they do? 3. Are multiple people allowed inside an ATM at a time? 4. After completing a transaction, what a person should do? 5. In an ATM, is it advisable to do multiple transactions by a person? If many people are waiting in a queue. If not, what should he need to do? 										
Relevance	<p><u>Correlating with concepts (10 minutes)</u></p> <p>A Brief discussion to relate the process of ATM with Critical Section problem in operating systems and requirements to solve CS problem.</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: center;"><u>Critical Section (Requirements)</u></th> <th style="text-align: center;"><u>ATM scenario</u></th> </tr> </thead> <tbody> <tr> <td>Critical section</td> <td>Accessing ATM at a time, only one person should access the machine.</td> </tr> <tr> <td>Mutual exclusion</td> <td>One person has to wait when the other person is using an ATM.</td> </tr> <tr> <td>Progress</td> <td>If a person completes his task, the other person should be permitted to access the ATM.</td> </tr> <tr> <td>Bounded waiting</td> <td>A person can do many Transactions if no one is present in the queue. If many are</td> </tr> </tbody> </table>	<u>Critical Section (Requirements)</u>	<u>ATM scenario</u>	Critical section	Accessing ATM at a time, only one person should access the machine.	Mutual exclusion	One person has to wait when the other person is using an ATM.	Progress	If a person completes his task, the other person should be permitted to access the ATM.	Bounded waiting	A person can do many Transactions if no one is present in the queue. If many are
<u>Critical Section (Requirements)</u>	<u>ATM scenario</u>										
Critical section	Accessing ATM at a time, only one person should access the machine.										
Mutual exclusion	One person has to wait when the other person is using an ATM.										
Progress	If a person completes his task, the other person should be permitted to access the ATM.										
Bounded waiting	A person can do many Transactions if no one is present in the queue. If many are										

		waiting, the user needs to return to the queue and wait for his turn.								
Confidence	<p><u>Lecture on CS problem (10 minutes)</u></p> <p>A brief on the Critical Section problem and its solution using PPT.</p> <p><u>Group Activity (10 minutes)</u></p> <ul style="list-style-type: none"> • The class will be split into eight teams / 4 students per team. • Pseudocode will be distributed as a handout to each team to discuss the following questions and come up with answers. <p>Example: Handout</p> <table border="1" data-bbox="516 640 1477 976"> <tr> <td data-bbox="516 640 1003 682">Process 1</td> <td data-bbox="1003 640 1477 682">Process 2</td> </tr> <tr> <td data-bbox="516 682 1003 976"> <pre>do { flag1= TRUE; turn = 2; while(flag2 && turn==2); print("process1"); flag1=FALSE; }while(1);</pre> </td> <td data-bbox="1003 682 1477 976"> <pre>do { flag2= TRUE; turn = 1; while(flag1 && turn==1); print("process2"); flag2=FALSE; }while(1);</pre> </td> </tr> </table> <ol style="list-style-type: none"> 1. Identify the critical section statement in the given pseudocode. 2. Identify the functions that resolve the CS issue. 3. List the statement that preserves the requirement. 		Process 1	Process 2	<pre>do { flag1= TRUE; turn = 2; while(flag2 && turn==2); print("process1"); flag1=FALSE; }while(1);</pre>	<pre>do { flag2= TRUE; turn = 1; while(flag1 && turn==1); print("process2"); flag2=FALSE; }while(1);</pre>				
Process 1	Process 2									
<pre>do { flag1= TRUE; turn = 2; while(flag2 && turn==2); print("process1"); flag1=FALSE; }while(1);</pre>	<pre>do { flag2= TRUE; turn = 1; while(flag1 && turn==1); print("process2"); flag2=FALSE; }while(1);</pre>									
Satisfaction	<p><u>Discussion and feedback (10 minutes)</u></p> <p><u>Answer</u></p> <table border="1" data-bbox="516 1339 1477 1495"> <tr> <td data-bbox="516 1339 1003 1381">Critical Section</td> <td data-bbox="1003 1339 1477 1381">Print statement in both process</td> </tr> <tr> <td data-bbox="516 1381 1003 1423">Mutual Exclusion</td> <td data-bbox="1003 1381 1477 1423">Variable - turn</td> </tr> <tr> <td data-bbox="516 1423 1003 1465">Progress</td> <td data-bbox="1003 1423 1477 1465">flag1, flag2, turn</td> </tr> <tr> <td data-bbox="516 1465 1003 1495">Bounded waiting</td> <td data-bbox="1003 1465 1477 1495">While loop</td> </tr> </table> <ul style="list-style-type: none"> • Feedback will be collected for the Activity carried out. • Answers will be discussed and make them evaluate their answers script. • Each team member will be awarded points based on the correct answer. 		Critical Section	Print statement in both process	Mutual Exclusion	Variable - turn	Progress	flag1, flag2, turn	Bounded waiting	While loop
Critical Section	Print statement in both process									
Mutual Exclusion	Variable - turn									
Progress	flag1, flag2, turn									
Bounded waiting	While loop
